Pain Management

Presented by Dennis Muzzi, LMSW

Chronic pain can be disabling, detrimental to functioning and at the very least, distracting. How do we treat it? Do opiates help? Why would the Michigan Legislature pass a law establishing a right to adequate pain relief?

This one hour course will begin to answer these questions. Research will be cited to help wade through the myriad of treatments. Traditional medicine, complementary and alternative medicine, psycho-social methods and other approaches will be presented. Specific techniques will be reviewed.

Watch the course videos and take the quiz from your computer, tablet or phone

\$25 fee for 2 CE credits, which will be issued within 5-7 business days after successful completion of the online course test
